

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 25, line 9, as follows.

Tumor volume on day 7 is shown in Fig. 4. Also, time course of the tumor volume is shown in Fig. 5. In the Figures, filled diamond represents untreated group; open triangle represents it (40); open circle represents it (80); filled square represents S (0); \times represents S (40); and filled circle represents S (80). Survival curves are shown in Fig. 6. In the Figure, open circle represents untreated group; open square represents it (40), open diamond represents it (80); open triangle represents S (40); and ~~open circle~~ closed circle represents S (80). # indicates $P<0.01$ for the untreated group, it (40) and it (80). * indicates $P<0.05$ for S (80). It is revealed that tumor growth was significantly suppressed and survival rate was improved by using the CDDP-impregnated gelatin sheet of the invention, compared to the case where the same amount of CDDP was intraabdominally administered in an aqueous solution.
